Enphase Energy Achieves ISO 9001:2008 and ISO 14001:2009 Certifications

ISO-certified quality and environmental management systems confirm the company's dedication to the highest quality standards in the industry

PETALUMA, Calif.--(BUSINESS WIRE)-- Enphase Energy, Inc. (NASDAQ:ENPH), announced today that it has achieved both the ISO 9001:2008 and ISO 14001:2009 certifications. ISO 9001 and ISO 14001 are the internationally recognized quality management and environmental management system standards from the International Organization of Standardization (ISO).

"The certification to both the ISO 9001 and 14001 standards represents a milestone achievement and is a testament to the hard work and dedication of the Enphase team," said Paul Nahi, CEO of Enphase Energy. "At Enphase, quality, continuous improvement and environmental stewardship are core values. The ISO certifications underscore Enphase's unwavering commitment to these principles and demonstrate the industry-leading level of systemic quality and reliability we provide to our customers."

When Enphase formally began its ISO certification efforts, an interdepartmental team was tasked with defining, documenting and auditing the quality management and environmental management processes. Following these efforts, the world-renowned VDE Testing and Certification Institute conducted third-party audits earlier this year at Enphase's sites in the United States, France and New Zealand. The VDE auditors confirmed that Enphase's comprehensive internal quality and environmental management systems comply with the requirements of both ISO standards.

The scope of the Enphase ISO 9001:2008 and ISO 14001:2009 certifications covers many departments: research, design and development, manufacturing control, sales, customer support and testing of residential, commercial and utility-grade solar microinverter systems and associated energy management services.

About Enphase Energy, Inc.

Enphase Energy delivers microinverter technology for the solar industry that increases energy production, simplifies design and installation, improves system uptime and reliability, reduces fire safety risk and provides a platform for intelligent energy management. The company has 100+ patents issued or pending and 400+ employees worldwide. Its semiconductor-based microinverter system converts energy at the individual solar module level and brings a systems-based, high technology approach to solar energy generation.
