Enphase Energy Releases New Features for Installer Toolkit Mobile App

The Enphase Installer Toolkit mobile app improves overall business operations and productivity for installers

PETALUMA, Calif.--(BUSINESS WIRE)-- Enphase Energy, Inc. (NASDAQ:ENPH), today announced new features for the [Enphase® Installer Toolkit](#), a mobile app designed to help solar installers improve overall business productivity by making installations faster and more efficient. Enphase has enhanced the Installer Toolkit so that installers can now use the app to wirelessly connect to the Enphase® Envoy Communications Gateway, which connects the system's modules and microinverters to Enphase's monitoring software.

By connecting to the Enphase Envoy, installers can quickly verify the system setup using the mobile app on their smart phone. The success of the installation is confirmed before the installer leaves the job site. This enables more efficient installations, saving labor costs without compromising quality.

"The Enphase Installer Toolkit has added time-saving advantages and improved the on-site efficiency of our installation teams," said Dan Rock, vice president of installation at Vivint Solar. "We're confident that the new features of this update will expedite installation time on-site and reduce time spent back in the office."

"In today's competitive market, installers are always looking for ways to reduce costs and improve operational efficiency. Increasing the productivity of the on-site installation team is key to achieving these goals," said Jeff Loebbaka, senior vice president of global sales, marketing and support of Enphase Energy. "With the Installer Toolkit, Enphase is helping to make installations easier and faster. It's a great foundation for more tools to come."

Once connected to the Envoy Communications Gateway, installers can use the Installer Toolkit to:

- | Verify that the microinverters are activated, communicating and producing power.
- | Configure a Wi-Fi network for reporting to Enlighten.
- | Select a location-specific grid profile for the microinverters when necessary.
- | View and email a summary report to confirm a successful installation.

The Installer Toolkit is available globally in English, French, Italian and German as a free download in the [iTunes app store](#).

About Enphase Energy, Inc.

Enphase Energy delivers microinverter technology for the solar industry that increases energy production, simplifies design and installation, improves system uptime and reliability, reduces fire safety risk and provides a platform for intelligent energy management. Our semiconductor-based microinverter system converts energy at the individual solar module level and brings a systems-based, high technology approach to solar energy generation.
