

Enphase Energy Enables Public Service Solar to Deliver a Better Customer Experience

FREMONT, Calif., Oct. 24, 2019 (GLOBE NEWSWIRE) -- [Enphase Energy, Inc.](#) (NASDAQ:ENPH), a global energy technology company and the world's leading supplier of solar microinverters, today announced that Public Service Solar, a leading residential solar installation company serving New Jersey and Pennsylvania, uses Enphase products to speed up solar installations, allowing the company's representatives more time to train their customers on the operations and benefits of their Enphase-based solar systems.

Public Service Solar serves homeowners in New Jersey and Pennsylvania by delivering a holistic customer experience, from first contact and the sale to final installation and throughout the life of the solar system. The company uses the Enphase IQ™ home energy platform to provide its customers with solar systems that are less prone to production losses from shading due to Enphase's resilient, distributed architecture and great reliability. Public Service Solar customers also benefit from Enphase's microinverter systems because they can be right-sized for individual homes since they are not bound to the strict sizing requirements of conventional string-inverter-based systems.

"Our customers tell us that they love having Enphase microinverters on their roofs because of their reliability and the ability to see energy production through the cloud-based Enphase Enlighten™ monitoring platform and app," said Mike Emmons, chief operating officer at Public Service Solar. "We also use the time that the Enphase platform saves our installation teams on the roof to turn our new customers into expert users of their new systems, which is a level of customer care that contributes to the great reviews we get online."

"At Enphase, we believe that part of offering an outstanding customer experience is to make solar simple and energy smart for both the installation teams as well as homeowners," said Dave Ranhoff, chief commercial officer at Enphase Energy. "The team at Public Service Solar not only takes full advantage of the technical aspects of the Enphase system; they also use the benefits it provides to successfully differentiate their service, which is exactly what we hoped our customers would do."
