

## Enphase Energy Expands Solar Deployments with Installers in Brasilia

FREMONT, Calif., June 20, 2023 (GLOBE NEWSWIRE) -- [Enphase Energy, Inc.](#) (NASDAQ: ENPH), a global energy technology company and the world's leading supplier of microinverter-based solar and battery systems, announced today that installers of Enphase® products in Brasilia have seen a significant increase in deployments of residential solar energy systems powered by IQ7AM™ Microinverters.

"After selling our first Enphase system installation in June 2022, we made the switch to offer Enphase products exclusively due to the strength of the company's best-in-class technology, customer support, and installer services," said Murilo Vidigal, project director at [Mavo Engenharia](#). "Our customers with Enphase-powered solar systems report great peace of mind thanks to a reduced need for ongoing maintenance and a highly customizable design that allows them the opportunity to grow their system as their energy needs evolve."

IQ7AM Microinverters leverage Enphase's unique software-defined architecture and semiconductor integration for excellent reliability and economies of scale. Enphase microinverters are subjected to a rigorous durability and quality testing regimen with more than one million hours of power-on testing to provide exceptional performance under heat, high humidity, salty air, extreme cold, and harsh climate conditions. The company's microinverters are backed by a 20-year warranty in Brasilia.

"We are offering Enphase microinverters for condominiums across Brasilia as a way to further differentiate our products and services," said Adriano Coury, partner director at [Solar Enerji](#). "Condominiums are a large, underserved market in Brasilia and Enphase products' high-performance capabilities and durable architectures provide maximum reliability and a superior customer experience."

Enphase microinverter systems integrate with the IQ™ Gateway, which can be connected to the internet to enable over-the-air updates and connect to the Enphase® App monitoring platform. The IQ Gateway and IQ® Microinverters are designed to make per-panel energy monitoring and insights for operations and maintenance simple for homeowners.

"One of the many things our team of installers in Brasilia loves about Enphase microinverters is their plug-and-play design that simplifies solar system design and streamlines installation," said Jair Medeiros, partner director at Siella Solar. "This means that our team can get projects up-and-running more efficiently so that homeowners can start seeing the benefits of solar faster. We also have a lot less need to service customers post-installation, which helps us focus our business resources on new customers."

"At Enphase, we take great pride in our collaboration with installers across Brasilia to deploy industry-leading solar energy systems," said Marco Krapels, vice president of international sales at Enphase Energy. "Together, we're committed to delivering world-class clean energy products that offer homeowners in Brasilia reliability, safety, savings, and monitoring capabilities."

### About Enphase Energy, Inc.

Enphase Energy, a global energy technology company based in Fremont, CA, is the world's leading supplier of microinverter-based solar and battery systems that enable people to harness the sun to make, use, save, and sell their own power — and control it all with a smart mobile app. The company revolutionized the solar industry with its microinverter-based technology and builds all-in-one solar, battery, and software solutions. Enphase has shipped approximately 63 million microinverters, and approximately 3.3 million Enphase-based systems have been deployed in more than 145 countries. ### **Forward-Looking Statements**

This press release may contain forward-looking statements, including statements related to the expected capabilities and performance of Enphase Energy's technology and products, including safety, quality, and reliability; the availability and market adoption of Enphase products in Brasilia; and growth in deployments of residential solar energy systems powered by IQ7AM Microinverters in Brasilia. These forward-looking statements are based on Enphase's current expectations and inherently involve significant risks and uncertainties. Actual results and the timing of events could differ materially from those anticipated in such forward-looking statements as a result of certain risks and uncertainties, including those risks described in more detail in Enphase's most recently filed Quarterly Report on Form 10-Q for the quarter ended March 31, 2023, its Annual Report on Form 10-K for the year ended December 31, 2022, and other documents on file with the SEC from time to time, which are available on the SEC's website at <https://www.sec.gov/>. Enphase undertakes no duty or obligation to update any forward-looking statements contained in this release as a result of new information, future events, or changes in its expectations, except as required by law.
