

Enphase Energy Announces Agreement with Akeena Solar

Multi-Megawatt Agreement Will Power Akeena's Andalay Initiative

PETALUMA, Calif. - (January 27, 2009) - Enphase Energy, Inc., the world's leading manufacturer of solar Micro-inverter Systems, today announced a multi-megawatt agreement with Akeena Solar, a leading designer and installer of solar power systems. Under the agreement, Enphase will supply up to 100,000 Micro-inverters over the next two years to be built into Akeena's award winning Andalay solar panel, creating an AC solar panel.

"The integration of Enphase Micro-inverters into our Andalay panels enables us to dramatically simplify the design and installation of residential and commercial solar systems. This means significant labor savings for installers," said Barry Cinnamon, CEO of Akeena Solar. "With the higher efficiency that Enphase Micro-inverters can provide, we expect that Andalay AC panels will offer a superior value to our rooftop customers."

"The Andalay system is a significant step forward in solar installation technology. We are very excited to partner with Akeena, and help advance its vision of reducing installation costs while increasing reliability and energy harvest," said Paul Nahi, CEO of Enphase Energy. "Enphase is uniquely positioned to partner with Akeena because of our experience and dedication to reliability. Enphase has delivered over 10 million unit hours of operation, and recently announced the Enphase Entrust program that includes a standard 15-year limited warranty."

Enphase Micro-inverter Systems convert the DC output of a single solar module into grid compliant AC power. Enphase systems maximize energy harvest, increase system reliability and are easier to design, install and manage than systems installed with traditional inverters. Tests have demonstrated that Enphase Microinverters deliver 5% to 25% more energy harvest than traditional, centralized inverters. In addition, a proprietary communication technology is embedded into each Micro-inverter, enabling continuous, remote, per-panel monitoring to maximize energy production.

About Enphase Energy

Enphase Energy provides solar energy management systems for residential and commercial markets. The company offers a networked system, which includes high-efficiency micro-inverters, communications and web-based

analytics. The systems increase energy harvest, increase system reliability, and simplify design, installation and management. Founded in 2006 and based in Northern California, the company is led by veterans from the solar and high tech industries and backed by industry leaders.
